HIV, TB AND VOLUNTARY BLOOD DONATION AWARENESS PROGRAM REPORT

**AWARENESS GIVEN BY: Mr. S.KARUPPUSAMY,
COUNSELLOR-STI,
GH,KANGAYAM.**

In the meeting held on September 8, 2021, In the Google Meet platform the students and public were given awareness on HIV, TB and voluntary blood donation. Counsellor Mr S.Karuppusamy spoke on the following points. Firstly, HIV (Human immunodeficiency virus), which is identified in the year 1981 at USA for the first time was renamed as Acquired Immune Deficiency Syndrome. If the infection progresses, it interferes more with the immune system. And increases the risk of developing common infections such as tuberculosis, as well as other opportunistic infections, and tumors which are otherwise rare in people who have normal immune function.HIV is spread by unprotected sex, contaminated blood transfusions, hypodermic needles, and from mother to child during pregnancy. Some bodily fluids, such as saliva, sweat and tears do not transmit the virus. There is no cure or vaccine. The types of tests are the screening test used an enzyme-linked immunoassay (ELISA) with confirmatory testing by Western blot and PCR (POLYMERASE CHAIN REACTION) test.

Secondly, TB (TUBERCULOSIS), which is an infectious disease usually caused by Mycobacterium tuberculosis (MTB) bacteria. Tuberculosis generally affects the lungs, but can also affect other parts of the body. It can be curable within 6 months. Symptoms of TB are a chronic cough with blood-containing mucus, fever, night sweats, and weight loss. Tuberculosis is spread from one person to the next through the air when people who have active TB in their lungs cough, spit, speak, or sneeze. Treatment of TB uses antibiotics to kill the bacteria.

Thirdly, voluntary blood donation, which are conducted by several organizations and hospitals by organizing blood donation camps. The donor must be fit and healthy, and should not be suffering from transmittable diseases. The donor must be 18-65 years old and should weigh a minimum of 50 kg. Haemoglobin level- A minimum of 12.5 g/dL.The time period between successive blood donations should be more than 3 months.These are the things which was learned by this orientation program.

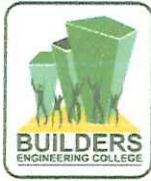

The above points were discussed and students clarified their doubts in Q&A session. Feedback was also collected from students.
